Germanic
Tenors

of the twentieth century

This disc aims at a systematic survey of Germanic tenors of the twentieth century. We included in this collection singers from Germany and from other countries singing largely in the German language, in German style and the German fach. Some 84 tenors were selected and are examined in depth. We have chosen representative recordings for each singer, added some biographical data and, in most cases, a photo. Because of its significance to Germanic singing, we have also provided a brief description of the Fach System.

You may access information and recordings quickly by

- alphabetical order
- date of birth
- membership in a Fach.
